

ON THE HIGH SEAS, the word is out: Injector has done it again. Skippers across the Atlantic and even beyond—familiar with Helgi Larsen's groundbreaking innovations in trawl doors—now maintain that the new Injector Scorpion outperforms its predecessor, the Injector Shark. And they're right, even if the Shark is still widely seen as an unbeatable door.

Skippers from all over agree, from Faroe to Falkland, from Greenland to Portugal, from Iceland to Argentina, from Scotland to New Zealand, from Norway to South Africa, and from eastern and western Canada to Spain and Russia: *The Injector Scorpion is the new champion, the world's most effective door for bottom trawling.*

Trawlermen become convinced the moment they get a taste of our highly developed, truly hydrodynamic, aeronautically designed trawl doors. No wonder, since these environmentally friendly doors save gallons and gallons of fuel on every fishing trip, while increasing catch substantially. The Scorpion has an unmatched ability to optimize trawling, offering supreme squaring capability and the smoothest towing. Steady during turns and disinclined to stick on seabed fasteners, it's the essence of stability. This versatile door works in virtually any conditions, whether in deep sea or shallow waters, on rough bottoms, muddy ocean floors or a sandy seabed. *Isn't your effort worth the best equipment?*

PELAGIC NEWS: The new Injector Stealth F9 and Stealth F15 models are made for midwater trawling but they are as effective and easy to work with as the Scorpion. For instance, rigging adjustments can be made safely on the back side with the doors in the gallows. What's more, with the best lift to drag ratio of any pelagic door on the market, the F15 represents nothing less than a breakthrough in lightweight trawl door technology.

On 23 March 2007, the Icelandic trawler Venus HF 519, owned by HB Grandi, made a record sale after fishing for 34 days in the Barents Sea. The trawler headed for port to land the most valuable load ever brought in from one single fishing trip by any Icelandic vessel, at 2 million EUR. The Venus uses 9m² Injector Scorpion trawl doors.

According to owner Thorbjörn Hf, the Icelandic trawler Gnúpur GK-11 made a record fishing trip, bringing in a 602-tonne catch worth around 1.2 million EUR. Trawled in the course of 33 days and landed on 6 March, the catch consisted chiefly in redfish, haddock, and cod. The Gnúpur is equipped with 8.7m² Injector Scorpion doors.

For more stories, and a list of the 54 trawlers that have now switched to Injector Scorpion, visit us on Stand E 569 (Vónin) at the North Atlantic Fish Fair.
