

Kølemadsen a/s

– More than 40 years of cool business

Our company was founded by N. L. Madsen in 1969. In 1986 the company moved into the current premises at Læssevej 18 in Hirtshals, Denmark. In 1989 N. L. Madsen retired after 20 years busy years operating his own business. On the same occasion, his son, Ivan Madsen took over the company. The original name of the company, Hirtshals fryse- og køleteknik, was changed into its nickname which friends, customers and staff had long ago given the founder of the company: Kølemadsen

Today the company has a staff of 10 competent employees and the third generation of the Madsen family, Jens Madsen, has joined the company as co-owner.

On land and at sea

We have specialized in producing, installing and servicing freezing and refrigeration plants. In the beginning, we primarily serviced fishing vessels, but as a number of fishing vessels decreased, we expanded our area of business which now includes onshore

freezing and refrigeration plants for the food industry.

Denmark and abroad

We work both in Denmark and abroad. We are primarily active in Denmark, Greenland and the Faroe Islands, and our work includes projects such as the Fish Terminal in Hirtshals, Denmark, as well as major freezing and refrigeration installations at shrimp and crab factories in Greenland. In 1991, we completed our first major international project: an ice plant, 20 tonnes, in Latvia followed by many projects in Russia and the Baltic states. Moreover we have headed projects in most part of Scandinavia.

We also install and service small and large air conditioning systems. In recent years, we have installed system on board fishing vessels, coastguard vessels, marine research vessels and cargo vessels.

Individual solutions – flexible service.

Reliable and efficient freezing and refrigeration plants is essential to preserve the quality and freshness of primary products. We have more than 40 years experience in this field and

take pride in delivering high quality work.

Unused refrigeration space can cost your company much money. In the long run, inefficient short-term solutions may affect your competitiveness adversely. We will map your company's freezing and refrigeration capacity before we start working and are of course prepared to put in extra effort to meet your special wishes. Calculations, designs and docu-

mentation are prepared both in the project and installation phases by our own engineer.

We design new plant and carry out service tasks of a certain scope throughout most of the world. In recent years, staff members have carried out tasks in so different places as Greenland, Faroe Island, the Bahamas, Egypt, Kazakhstan, Bangladesh and Australia.

One of our next projects is to re-

build/convert 2 pieces of RSW-plants onboard the fishing vessel NÆRAB-ERG from refrigerant R22 to refrigerant R507 since R22 now is phased out

Always nearby.

We know that it means loss of primary products, working hours and profit if you have to wait for your refrigeration plant to be repaired or maintained. We are therefore ready to go to work as soon as the fishing vessel moors alongside the quay, or a defect occurs in the refrigeration plant in the production plant in the production hall. We are only a phone call away.

Kølemadsen offers sale, installation, repair and servicing of:

- Plants for air conditioning
- Plants for manufacturing ice soup
- Cold rooms and stores
- Ice machines – all sizes and production capacities
- RSW plant, plate freezers, tunnel freezers and refrigeration plants
- Heating pumps
- Delivery of refrigerants and all spare parts

*...siger nej til lunken øl og smeltet smør
Mere end 40 års erfaring med alle
typer af køle og fryseanlæg*

Kølemadsen a/s har arbejdet med køle- og fryseanlæg siden 1969 og har stor erfaring i såvel installation samt reparation af alle typer anlæg på fiskeskibe og landanlæg. Vi er desuden leverandører af alt køleudstyr for industrielle fødevarefabrikker som slagterier, mejerier, fisketerminaler, fødevarebutikker, restauranter – kort sagt alle steder hvor køling og frysning er en nødvendighed.
